

# Optimizing Energy and Cost-Savings: Energy Efficiency Programs from Silicon Valley Power

When you choose to locate your business in the City of Santa Clara, you reap the benefits of a variety of energy efficiency programs, as well as realize cost and energy savings. Silicon Valley Power (SVP), the City of Santa Clara's municipal electric utility, supports your move and operations through affordable, sustainable and reliable energy; great service; lighting, equipment and construction rebates; turnkey services; and free energy audits. SVP also provides the opportunity to join **Santa Clara Green Power** and the **Neighborhood Solar Program**.

## Energy at its Best

Offering electric power at rates 25 to 35 percent below neighboring communities, SVP enables businesses to enjoy energy savings up to \$1 per square foot per month. SVP boasts of 29 percent eligible renewable resources, and its service reliability ranks in the top 2-3 percent of the nation.

## One-Stop Shopping

SVP's Small Business Efficiency Service paves the way for easy installation of energy-efficient lighting and equipment in your facility. Through the program, staff manages an entire project from start to finish by identifying and implementing cost-saving opportunities, obtaining competitive bids from vendors, monitoring construction and ensuring rebates.

A free, onsite energy audit assesses your electrical equipment, energy usage and needs, and makes cost-saving recommendations.

## Rewards for Energy Savings

SVP's broad range of rebates rewards customers for purchasing and installing energy-efficient lighting, LED exit signs, HVAC systems, chillers, LCD monitors and commercial washing machines. Take advantage of customized, energy-saving rewards for customer-directed projects that decrease electrical usage. Visit [www.svpower.com/bus](http://www.svpower.com/bus) for a list of rebates and requirements.

## Building Your Business

SVP offers a new construction incentive for building, renovating or expanding facilities using energy-efficient equipment. Once you are up and running, SVP can help you increase the energy performance of building systems and equipment efficiency through its Compressed Air Management Program (CAMP) generating energy savings.

## Renewing the Environment

SVP is committed to giving customers the lowest cost power available, while also leaving a clean footprint on the environment. Our optional **Santa Clara Green Power** program offers 100 percent renewable energy—wind and solar—for just a penny and a half extra per kilowatt hour (1.5 cents) for small business. Larger commercial customers may purchase 100 percent green power or buy blocks of 1,000 kilowatt-hours for \$15 each.

SVP's **Neighborhood Solar Program** supports the installation of solar systems on community facilities, such as Haman Elementary School and Valley Village Retirement Community.
